

(a) Portability matrix

Finding	Primary	Replication	Portable?
Dispersion (Levene's)	$p < 10^{-30}$ VR = 2.3	$p \approx 10^{-137}$ VR = 1.65	YES
Donor-level shift	$p = 0.026$	$p = 0.002$	YES
Cell-level displacement	$p = 1.0$	$p = 1.0$	NO (consistent)
DATP enrichment	3.1x	0.48x (reversed)	NO
IFN program	↑ COVID	$p \approx 10^{-194}$	YES
NF-κB program	↑ COVID	$p = 0.71$ (NS)	NO

(b) Replication significance

(c) State scores in replication cohort
